

Coursera Course9

Week5 assignment

Which country can we avoid most tourists

Background: over a year, COVID-19 is one of the biggest interest for everyone.

Due to this current situation, our social life and activities are very limited.

Although Traveling is one of the most popular pleasure for our holiday, we have to stay at home to make the situation even better.

I am the one who is looking forward to travel again, but where should I go next?

I don't want to go to a crowded places to reduce the risks.

I also don't want to go expensive places, which I can still enjoy my holiday with lower budget.

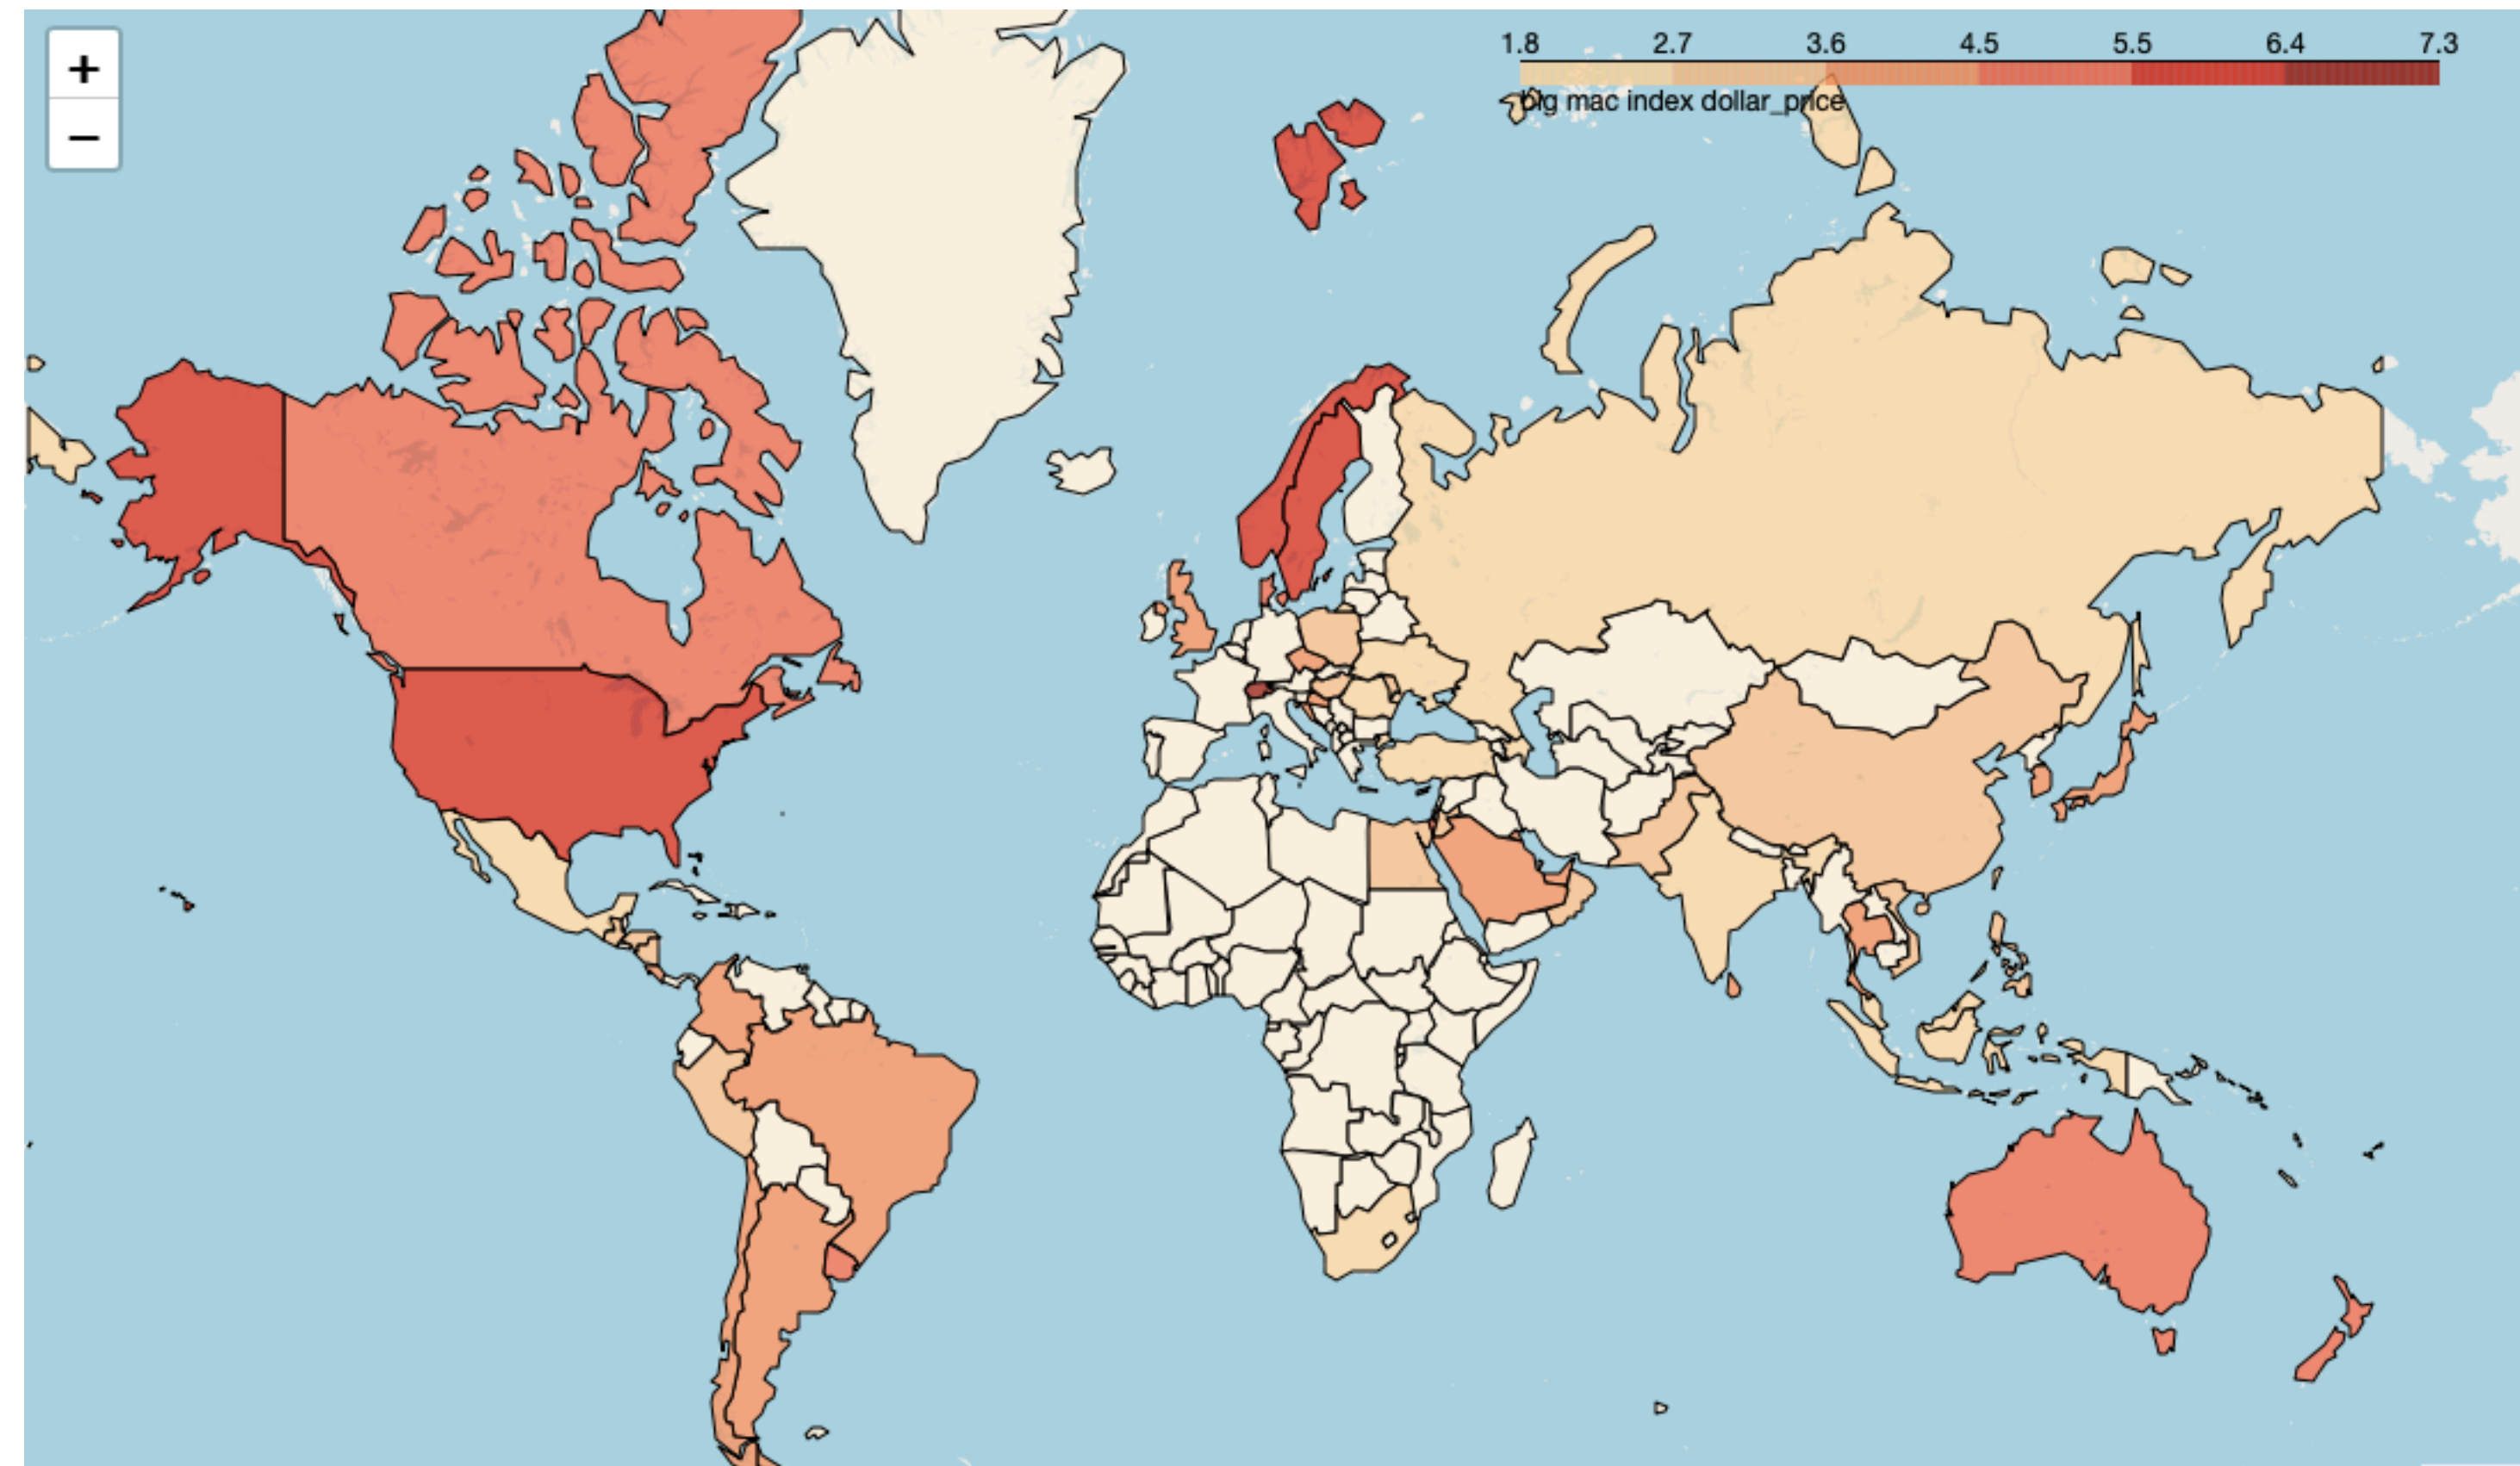

Target: to have some idea, which country can be my next holiday destination

NOTE) this project is nothing about violating regulation nor rules.

this project is to apply the know-how from this course.

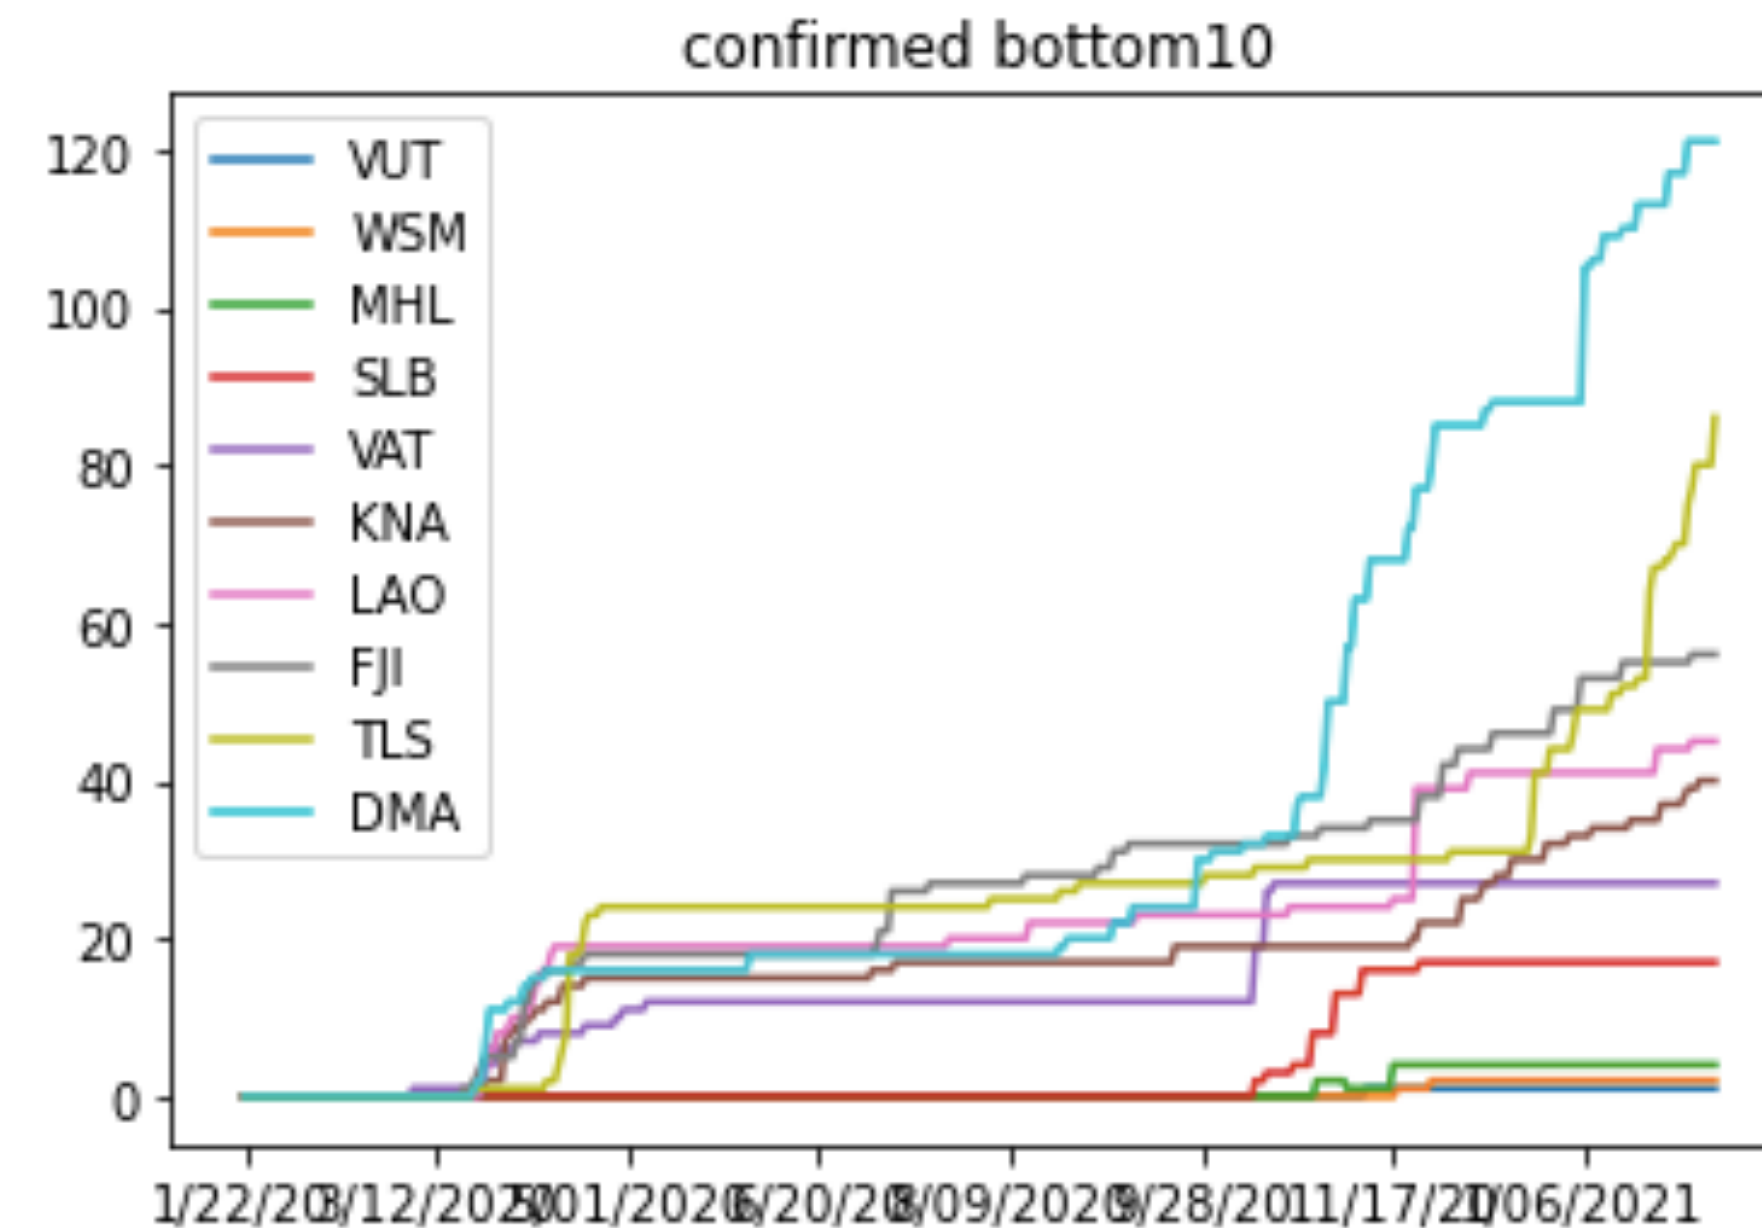

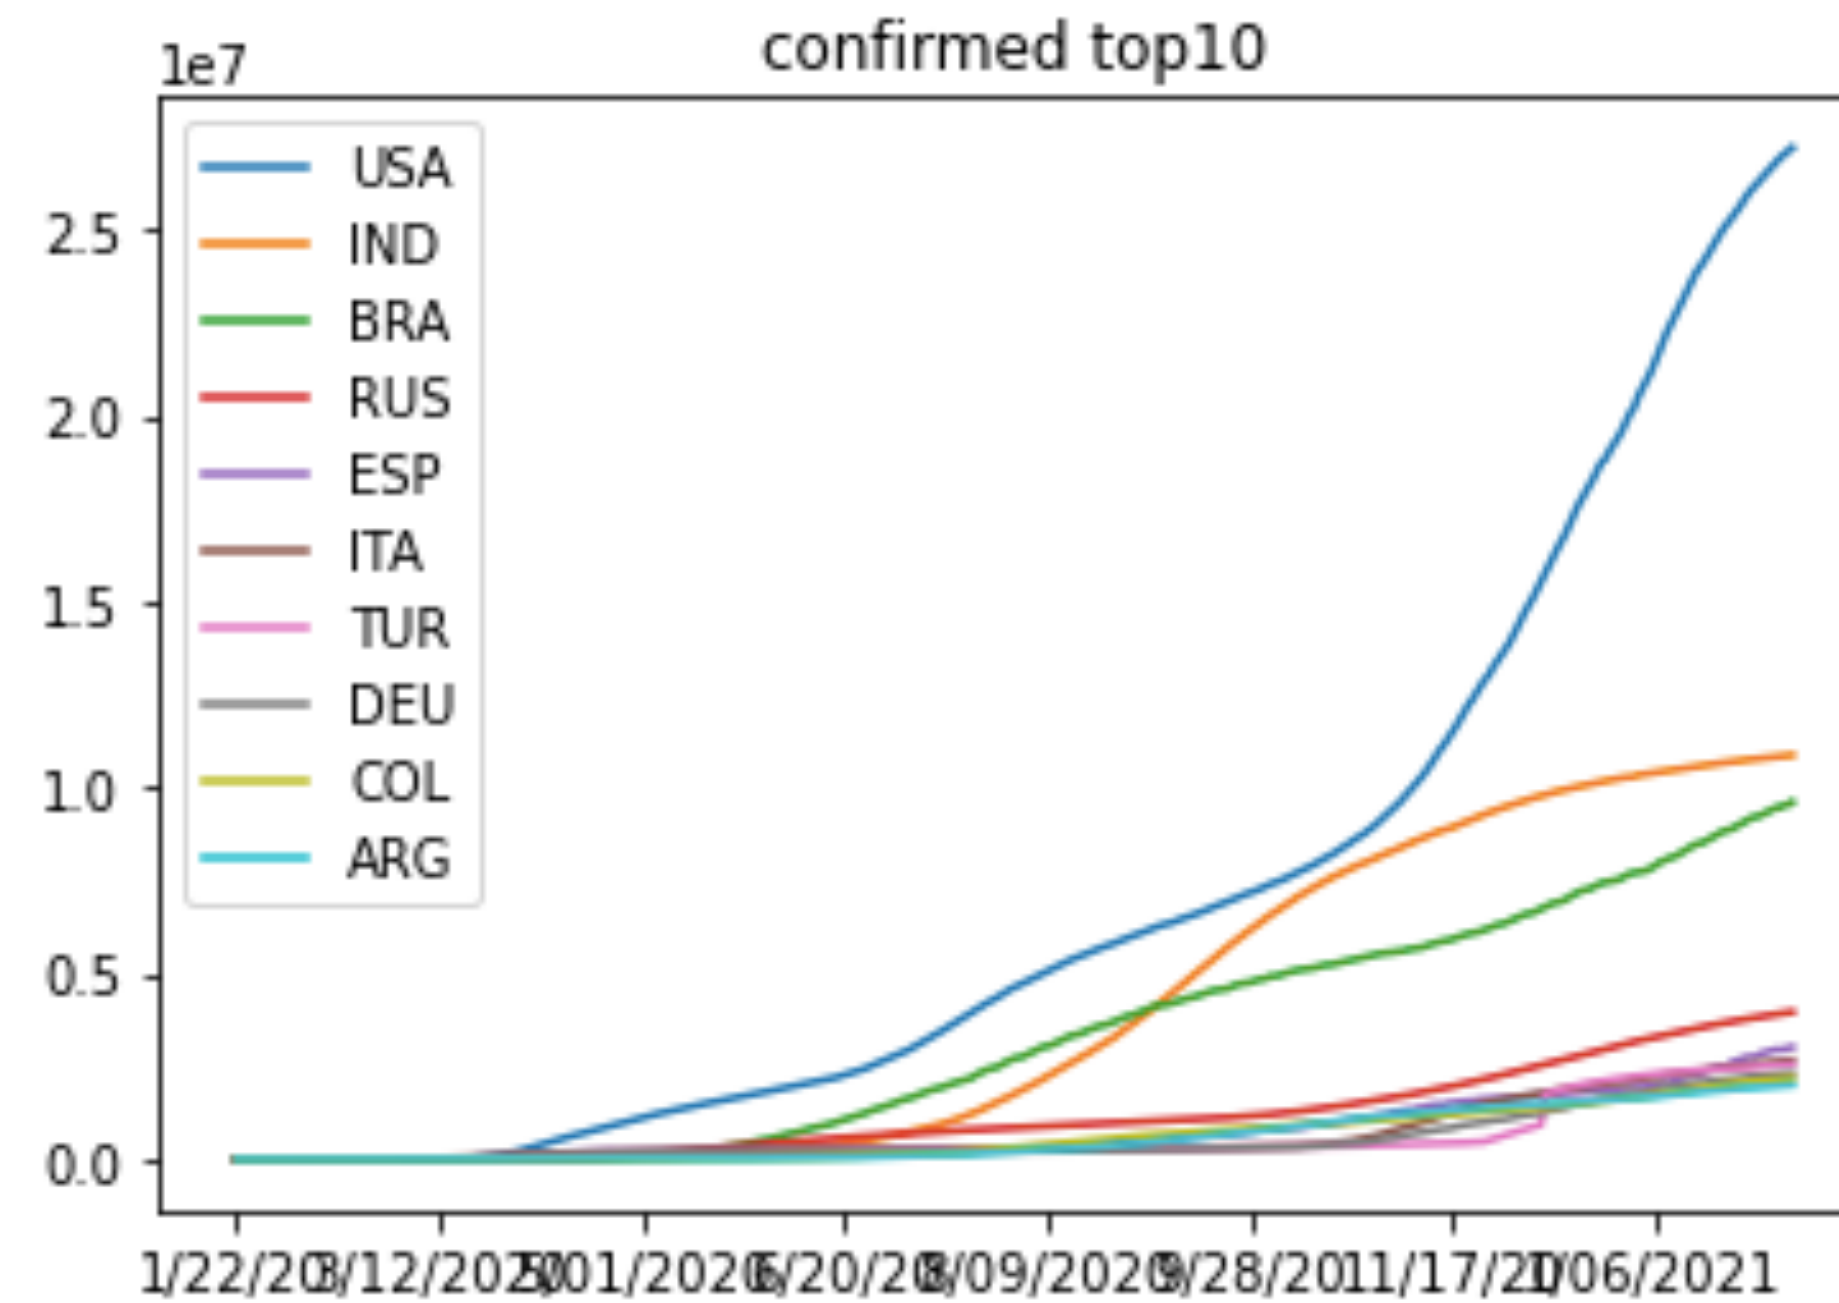

Price index

from the result of price index,
developed countries are relatively
expensive.
also NZ and Australia is showing
expensive result.
BRICS are not that expensive as US
but i can see it is not that cheap either

COVID

the result of analyzing COVID data, I can see US, India, Brazil are on the top of the list. on the other hand, Vanuatu, Samoa Island are the bottom on the list. unfortunately no matter on the top/bottom of the list, the number is increasing. but mostly the countries on the bottom of the list are island-ish country. this means they have less contact to other countries and easy to control the people from the border.

CONCLUSION

some island-ish countries showing the better result of COVID number. and most of them are not expensive countries. before this project, i was thinking New Zealand will be suggested as ideal holiday destination. but actually those small island/countries are more fitting to my desire. the background of this result is the price index. New Zealand is relatively expensive country. so if i want to save my budget, New Zealand will not be the ideal option.
